September 1955

1954 DHIA FEED TABULATIONS

Feeding is one of the most important factors in the efficient production of milk and represents the largest item of expense in milk production. Feed records can be useful tools in properly feeding a dairy herd for top efficiency in milk production and for making the greatest possible financial return above feed costs.

Last year, for the first time, feed record data on DHIA herds were reported so as to make it practical to handle and compile mass feed data on punch card tabulating equipment. All complete feed data received from the States on DHIA herds for the DHIA testing year 1953-54 were summarized and various feed tabulations compiled and returned to the States for study and use. Studies are being continued on methods and procedures of reporting and processing feed records. The results will be returned to the States for their information, study and suggestions, in an attempt to obtain more accurate data on the feed or nutritional input of DHIA herds. Feed records are not only helpful in the proper feeding of DHIA herds, but are useful in evaluating the lactation records used in proving sires.

On the following page is a tabulation showing, by States, the average milk and butterfat production and feed consumed per cow, based on the complete herd reports received for the DHIA testing year 1953-54.

SUMMARY of the 1953-54 DAIRY-HERD-IMPROVEMENT-ASSOCIATION RECORDS, BY STATES ^{1/}

State	Herds	Records used	Average Production			Average Feed Consumed			Concentrates fed per 100 lb. of milk produced	Average Days on Pasture
	on Test		Milk	Test	Fat	Roughage		Concentrates		
	1-1-54					Succulent	Dry

- ^{1/} Based on complete individual herd records, as reported by association supervisors.
^{2/} Complete feed data not reported.
^{3/} Changed testing year from calendar to fiscal year. Only one-half year reported.

DHIA PROVED-SIRE RECORDS TABULATED IN AUGUST 1955

Following is a list of 585 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in August 1955. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire record.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
